

TECHNICAL RESCUE TRAINING OPPORTUNITY

INTRODUCTION TO DESCENDERS, CARABINERS & ROPE

Sign up to learn more about the various descent control devices (DCD's) on the market today used in technical rope rescue & rope access. This program will present information on many devices including the Pros and Cons, capabilities, limitations, standards & regulations and how they may or may not apply to the end user. Rarely do personnel get a chance to put hands on with multiple devices in one program. Have you ever wondered what the difference was between carabiner shapes, steel vs. aluminum, two stage vs. three stage, large vs. small, NFPA vs. ANSI? What about rope? Some rope is easy to tie knots while others may be a challenge, some is low stretch and others may be high. It goes on and on. Participants will handle and use different mechanical descenders, carabiners and life safety rope from various manufactures and will get an opportunity to ascend, rappel, raise and lower systems to develop a fair and impartial opinion on these devices. And yes, you will get to use the Maestro and CLUTCH in both sizes.

Descenders

- CMC Clutch by Harken (11mm & 13mm) and the MPD
- ISC D4 & D5
- Petzl EVAC
- Petzl ID (Both large [Red] and Small [Gold]) (New & Old Versions)
